

HOW TO USE ISO 14090

TO SUPPORT ADAPTATION TO CLIMATE CHANGE IN AN
ISO 14001 ENVIRONMENTAL MANAGEMENT SYSTEM

INTRODUCTION

The climate is changing, and this poses risks and opportunities for many organisations. Climate change is bringing a variety of changes such as different weather patterns, more extreme weather events, sea-level rise, flooding, storm surges, drought, and erosion. Loss of biodiversity, changes in air quality, effects on employee health and safety, disruptions to operations and value chains, and changes to the wider business, political, and regulatory context – these are a few of the possible effects of climate change, which organisations are experiencing to one degree or another and are of importance to many.

The Paris Agreement and the UN Sustainable Development Goals (SDGs) provide direction for organisations to take action to address material environmental aspects and impacts, as well as environmentally related effects on the organisation. Using the ISO 14001 and 14090 framework standards for environmental management systems and adaptation to climate change in combination can help organisations to align with these international initiatives and facilitate integration and management of climate change adaptation.

ENVIRONMENTAL IMPACTS – MITIGATION AND ADAPTATION

Those already using ISO 14001 Environmental Management Systems (EMS) will know about mitigating climate change, but now adaptation to climate change is recognised as a high priority. Climate change impacts seem to be accelerating, and mitigation efforts will take decades to have a beneficial effect.

ISO 14001 requires consideration of how environmental conditions can affect the organisation, within its environmental management system. Now ISO 14090 provides a framework for understanding, responding, and adapting to the effects of climate change.

This publication informs users of ISO 14001 about:

- The benefits of using ISO 14090 alongside ISO 14001;
- How ISO 14090 is structured; and
- Relevant clauses in both standards where ISO 14090 supports an ISO 14001 EMS.

MITIGATION AND ADAPTATION

Climate change mitigation relates to actions that limit the extent of climate change. This normally involves minimising or avoiding greenhouse gas and other emissions that contribute to climate change. It can also involve activities that remove carbon dioxide from the atmosphere.

Climate change adaptation is the related process of adjusting to the changing climate and its effects. Climate change adaptation can be incremental or transformational for organisations. Whatever the scope and scale, organisations will be more successful when climate change adaptation is well managed.

ISO 14090 AND ISO 14001

ISO 14090 is an international standard that provides organisations with a practical, structured approach for addressing and adapting to the effects of climate change. It provides a focus on how an organisation is affected by climate change, as well as how the organisation in its adaptation process must also aim for sustainability and synergy with mitigation of climate change.

ISO 14001 has an emphasis on environmental performance and the impact that an organisation can have on the environment. This Standard also requires an organisation to consider, and where necessary, take action to address identified risks and opportunities related to its context - including risks and opportunities associated with environmental conditions that can affect the organisation. Thus, while an organisation's starting point with ISO 14001 may be associated with its impact on the environment, the added value of ISO 14090 is its focus on the effects of climate change on an organisation.

Considering that climate change will continue over a long period of time, ISO 14090 provides emphasis on environmental management with regard to climate change adaptation efforts over the short, medium, and long term. This includes considering the timescale associated with the consequences of potential adaptation actions and evaluating adaptation options over the lifespan of these consequences, as well as identifying indicators to measure the evolution of climate effects on the organisation over time, and how the organisation's capacity for adaptation evolves.

For ISO 14001 users with climate-related risks and opportunities that need to be addressed, ISO 14090 offers extensive guidance on temporal considerations and management of climate-related change as the organisation and environmental context evolve.

ISO 14090 can help an organisation to enhance its understanding of climate risk and adaptation, as well as to understand and document the impact of its activities and related improvement measures, in support of the Paris Agreement and the UN Sustainable Development Goals. It has been written in a way that should make it relatively easy for users of ISO 14001 to adopt. Many of the requirements in ISO 14090 can be aligned with actions already being undertaken by organisations that use ISO 14001.

WHERE DOES ISO 14090 SUPPORT ISO 14001?

If your organisation implements an EMS, you may benefit from the insights provided in ISO 14090, given the increasing importance for organisations to address climate-related risks and opportunities. The following table indicates how clauses in ISO 14001 can be supported by parts of ISO 14090, with direct reference to key clauses in each. Notes explain the rationale.

ISO 14001	Supporting ISO 14090 clause(s)	ISO 14090 - Explanatory Notes
<p>4.1 Understanding the organisation and its context</p> <p>Requires identification of internal and external issues that could affect the organisation's ability to meet intended outcomes of its environmental management system (EMS) - such issues may include climate or climate-related conditions that can affect the organisation or be affected by its activities.</p> <p>Note: this calls for a conceptual understanding of the important issues, rather than a detailed assessment.</p>	<p>5 Pre-planning</p> <p>6. Assessing climate change impacts including opportunities</p>	<p>Pre-planning involves assessing the capability of the organisation to undertake Clauses 6 to 10. The process is relevant when an organisation initiates climate change adaptation, and when reassessing or revising its climate change adaptation.</p> <p>Climate change and the impacts of climate change are external issues relevant to the purpose of many organisations. Clause 6 requires an organisation to assess how its activities, products and services might be affected by climate change, including slow onset (chronic) impacts as well as sudden (acute) impacts due to extreme events. This can also involve analysing influencing factors relevant to the organisation's context, such as internal and external policies; organisational strategies; and life cycles of policies, plans and assets.</p>
<p>4.2 Understanding the needs and expectations of interested parties</p> <p>Requires identification of the needs and expectations of interested parties that are relevant to the organisation's EMS and determination of those it will comply with, including legal requirements. This can include climate or climate adaptation related needs, expectations and obligations.</p>	<p>5 Pre-planning</p> <p>6. Assessing climate change impacts including opportunities</p>	<p>Pre-planning involves identifying interested parties and how the organisation engages with them. Clause 5 provides guidance on potential interested parties with regard to climate change adaptation, as well as benefits of their consultation and participation.</p> <p>Clause 6 requires a comprehensive, cross-cutting (systemic) assessment of climate change impacts on the organisation. This can involve analysing various influencing factors, including climate adaptation actions taken by third parties.</p>

ISO 14001	Supporting ISO 14090 clause(s)	ISO 14090 - Explanatory Notes
<p>5 Leadership</p> <p>Specifies how an organisation's top management is expected to demonstrate leadership, commitment to, and accountability for the EMS (5.1), and to assign EMS roles and responsibilities within the organisation (5.3). This includes roles and accountability for climate action.</p> <p>Requires an organisation to establish an environmental policy (5.2) to formally express specific commitments for protection of the environment, relevant to its context. If applicable, this can include commitments related to climate change mitigation and adaptation.</p>	<p>5 Pre-planning</p> <p>6.3 Assessing adaptive capacity</p> <p>7 Adaptation planning</p> <p>7.3 Decision-making</p> <p>8.1 Leadership and commitment</p> <p>7.1 General</p> <p>7.2 Policy, strategy and planning context</p>	<p>Pre-planning can also be referred to as scoping, with regard to adaptation efforts and capabilities. It involves an assessment of the organisation's capabilities and context relative to climate adaptation and could be helpful in defining management system boundaries with regard to adaptation activities.</p> <p>Subclause 7.4.2 also requires an organisation to identify the boundaries of the organisational system being addressed.</p>

ISO 14001	Supporting ISO 14090 clause(s)	ISO 14090 - Explanatory Notes
<p>6. Planning</p> <p>Requires an organisation to identify risks and opportunities that it deems necessary to address in its EMS. Sources of risks and opportunities include</p> <ul style="list-style-type: none"> - environmental aspects (6.1.2) - ensuring climate change-related aspects are considered; - applicable legal and other requirements (6.1.3); and - relevant issues, environmental conditions or stakeholder expectations identified in 4.1 and 4.2. <p>For environmental aspects in particular, evaluation criteria must be applied, and this can take the form of a risk assessment.</p> <p>An organisation must then plan actions to address these particular risks and opportunities (6.1.4), including setting environmental objectives and plans to achieve them, as well as identifying indicators for monitoring progress (6.2). This can include climate action objectives and plans.</p>	<p>6 Assessing climate change impacts including opportunities</p> <p>7. Adaptation planning 7.3.2 Identification of climate change adaptation actions</p> <p>7.4 Adaptation Plan</p> <p>8.2 Implementation plan</p>	<p>Requires assessment of climate change impacts on the organisation, as well as assessment of the organisation's capacity to adapt to these impacts.</p> <p>Provides guidance on impact assessment methods, including risk assessment, vulnerability assessment, and thresholds analysis. Provides guidance on identifying opportunities that can arise from climate change and climate adaptation.</p> <p>Requires an organisation to establish climate adaptation priorities, identify adaptation actions, develop an adaptation plan, and incorporate adaptation into its policies, strategies, and plans. This includes extensive guidance on (1) identifying and evaluating a range of potential actions assessing them for suitability to the organisation's needs and capabilities as well as evaluating their potential impacts and making informed decisions to select adaptation actions to be taken; and (2) developing the content and objectives of the plan.</p> <p>Clause 7.4 provides guidance on climate change adaptation actions, which can be integrated to address climate-related risks and opportunities. Together with subclause 7.3.2, this includes</p> <ul style="list-style-type: none"> • Soft measures linked to building adaptive capacity, for example, developing new knowledge, embedding climate change into the organisation's policies and operational procedures, training, and awareness raising. • Hard measures involve structural approaches, such as infrastructure and/or buildings designed for adaptation; as well as ecosystem-based adaptation, such as flood protection zones, and natural soil surfaces for rainwater management.

ISO 14001	Supporting ISO 14090 clause(s)	ISO 14090 - Explanatory Notes
<p>7 Support</p> <p>Clause 7 Includes requirements for a range of actions and processes that support implementation of an effective EMS, including planned actions to address identified risks and opportunities or to achieve the environmental objectives, and provision of the necessary resources (7.1).</p> <p>Support actions include determining, and where necessary acquiring, the necessary competence among personnel in order to meet environmental performance objectives and requirements (7.2); ensuring awareness of the EMS and how work activities can affect the environment (7.3); establishing processes for internal and external communication relevant to the EMS (7.4); and control of documented information to ensure it is protected and available when needed (7.5). Support actions can be applied in relation to climate action objectives, climate awareness, and communication, as appropriate.</p>	<p>5.0 Pre-planning</p> <p>6.1 General</p> <p>10 Reporting and communication</p>	<p>Pre-planning involves assessing, and where necessary establishing, the capability of the organisation to undertake Clauses 6 to 10. This can tie in with establishing competency among personnel, in ISO 14001.</p> <p>Clause 10 provides guidance on external communication and reporting on climate change adaptation. It may also support answering the growing expectations of stakeholders in relation to documenting climate impact or risk reduction.</p>
<p>8 Operation</p> <p>Requires control of operations as needed to meet EMS requirements and implement actions to address identified risks and opportunities - including those related to climate change. This includes establishing operating criteria, implementing controls, and ensuring environmental requirements are communicated and addressed across the product life cycle stages, as appropriate.</p>	<p>7. Adaptation planning</p> <p>8.2 Implementation plan</p> <p>9 Monitoring and evaluation</p>	<p>Sub-clause 8.2 provides guidance on transforming the climate change adaptation plan into activities.</p>

ISO 14001	Supporting ISO 14090 clause(s)	ISO 14090 - Explanatory Notes
<p>9 Performance Evaluation</p> <p>Requires monitoring and evaluation of environmental performance, compliance with legal and other requirements, and the adequacy of EMS implementation, as well as management review of the system and changing circumstances in order to inform decisions on actions needed for improvement. This can include consideration of the effects of climate change on the organisation, and related decisions on adaptation.</p>	<p>9 Monitoring and evaluation</p>	<p>Clause 9 offers guidance on using monitoring and evaluation to ensure that satisfactory progress on climate change adaptation is confirmed, and that indications of unsatisfactory progress are timely enough to enable the organisation to take corrective action.</p>
<p>10 Improvement</p> <p>Requires taking action to address opportunities for continual improvement identified in performance evaluation, and to achieve EMS intended outcomes. This can include actions for adapting to climate change.</p>	<p>Introduction</p> <p>4.3 Flexibility</p> <p>7 Adaptation planning</p>	<p>The approach of 14090 is iterative, supporting continual learning and improvement processes. The organisation is required to adopt an adaptive management approach that enables the capture of new knowledge and learning from the experiences of decision-making to inform future decisions.</p>
